# Self-Reflective Grading
## Weekly Worksheet

| Name | Weeks |
|------|-------|
| Ian Salim | ①2  3  4  5  6  7  8  9  10 |

List what you consider to be the most important **topics** for this reflective period. For each topic, describe **how you practiced** understanding the material.
*Common ways: attending class, participating in class, surface reading, careful reading, practice problems, homework problems, discussions with peers, discussions with professors.*

It's only week 1 so we haven't really gone deep into anything, but I believe the most important topics for now is basic math and basic c++ syntax. In order to practice to understand the material, I went back to my calc notes from freshman year. For the c++ syntax, I kept writing the code from scratch.

For each topic, give a 1-2 sentence explanation of **why this topic is covered in this course** and **how it connects to previous topics**, either in this course or in other courses you have taken.

basic math, this was included to remind us of how to use logs.

For c++ syntax, this class is in c++, so understanding the c++ syntax should be necessary.

List **all major topics/concepts/ideas** from the course so far and note whether you feel you have mastered the topic **(M)**, are proficient in the topic **(P)**, or are still a novice in the topic **(N)**. You can sort these however makes sense for you and your brain.

math — in between P-M

C++ — in between N-P

Based on your current understanding of the course topics and what you have done to practice them, what would you assign for a **letter grade** at this point in the term?

A
